

Pooria Zoloorian

Full-stack & on-chain engineer

pooria.zln83@gmail.com

github.com/pooriazln

pooriazln.ir · Shiraz, Iran

I take products from architecture and data models through to deploy. Most of what I work on is backend-heavy and on-chain — smart contracts, realtime systems, and payments — and I build the frontends for the same products, so I own a project end to end instead of handing it off in pieces. **Currently at Tav Holding, building Arandao.**

WHAT I BUILD

On-chain systems — Solidity & Tact contracts, token launches, tokenomics, cross-chain bridges, on-chain payments.

Telegram mini apps & bots — Games and bots with on-chain payments on TON.

Full-stack products — APIs, dashboards, CRMs, auth, realtime systems. NestJS, Go, Next.js, Postgres.

Interactive web — Interactive 3D interfaces with Three.js and WebGL.

SELECTED WORK

Arandao

CURRENT · WEB3

A Web3 platform with multi-tier referral mechanics, DAO governance, tokenomics, and a cross-chain bridge.

tondb

SOLO BUILD · TON

A discovery and voting platform for Telegram projects — users rate projects and earn a TON token for their activity, paid out by a Tact token contract.

Aryosense

BACKEND

A platform for user-built multiplayer 3D worlds — create, share, and explore spaces together in realtime, with AI-driven characters.

Clinify

FULL-STACK

A doctor-appointment platform for clinics — scheduling, bookings, and patient management.

Redstart Apply

FULL-STACK

A study-abroad and migration consultancy site — school and university listings, consultations, and bookings.

Cice

FULL BUILD · AI

An AI style assistant: real-time body modeling from height and weight, with size-aware shop recommendations over semantic product search.

Jiggle

FRONTEND · FREELANCE

A Telegram tap-to-earn game with on-chain payments on TON.

Chadko

FULL-STACK

A cross-platform Electron app for automated posting (macOS, Windows, Linux), plus a support-chat system with a reusable npm chat client.
